98point6

Technology for providing exceptional virtual care

Making it easy to deliver care with custom telehealth solutions powered by machine learning and artificial intelligence

Improve provider efficiency

Our Automated Assistant handles 80% of the medical interview and generates post-visit documentation to reduce clinicians' administrative load and decrease provider burnout.

Increase patient access to care

Backed by extensive user research, patients can start a visit or chat with a provider from anywhere they have phone service. Our software platform is designed to meet patients where they are.

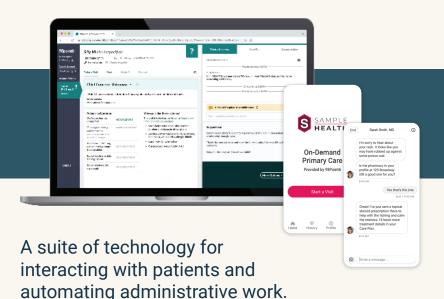

Open new revenue streams

Our technology allows you to complete more visits without increasing your workforce—all while preserving care quality and patient outcomes.

Integrated On-Demand Virtual Care Solutions

Asynchronous and Real-time care delivery software enabling a best-in-class virtual care experience.

Async Telehealth Offering

Increase clinical capacity by responding to patients' low-acuity concerns when convenient. The asynchronous, or non-concurrent, solution uses natural language processing and automation to gather pertinent medical information.

Customized Solution

By focusing on each organization's unique use case, provider workflow, patient experience, and back-end integration, 98point6 implements a secure, white-labeled digital solution tailored to each customer's needs and virtual care model.

Real-Time Virtual Offering

An Al-powered solution to treat patients through live-text or video visits. Designed with clinicians in mind, the tool provides decision support, aligns with practice standards, and integrates bi-directionally with EHRs.

Combined Power

Together, the Async and Real-time offerings by 98point6 provide care delivery organizations with a stronger, more integrated technology suite for virtual care delivery.
